

We are here
to facilitate in the
reunification of
our community
on this planet.

JOIN US IN
ITS CREATION

THE GOAL IS GLOBAL HUMAN FULFILLMENT

#Moneyless and **#Coercionless**
societal systems can be built with
our community-based societal
specification standards

JOIN IN, THIS IS WHAT WE CAN ACCOMPLISH
TOGETHER, THROUGH
PROJECT COORDINATION

Coordinating a
free (moneyless) access-based lifestyle

Societal Engineering

Our common heritage forms an
Integrated Habitat Service System

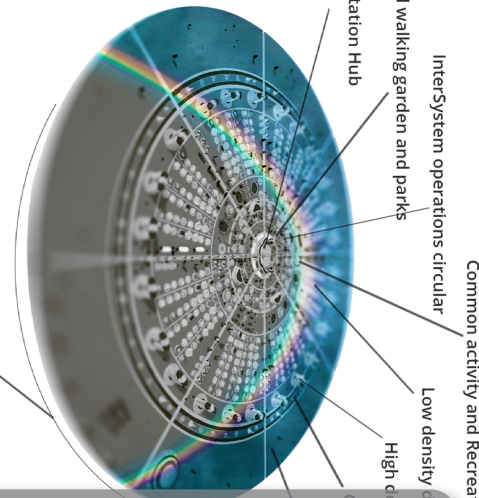

Encouraging
positive organizational societal design
and spatial service automation

Don't settle for less

Project Auravana

one earth
one design

auravana.org

A new context for our current
socio-technical reality.

All goods and services can be made available without the use of money, credit, barter, debt, or servitude of any kind.

Money free cities (moneyless habitats)

The Auravana Project societal standards describe the concept and operation of a society that does not use money (i.e., does not have a "market").

Coercion free cities (Stateless habitats)

The Project's societal publications describe the concept and operation of a society that does not use coercion, power-over-others, or punishment (i.e., does not have a "State"). Is entirely transparent and openly organized.

Global human need fulfillment

The Project's publications explain how cities (habitats) may be constructed to meet the life, technology, and exploratory support needs of the population.

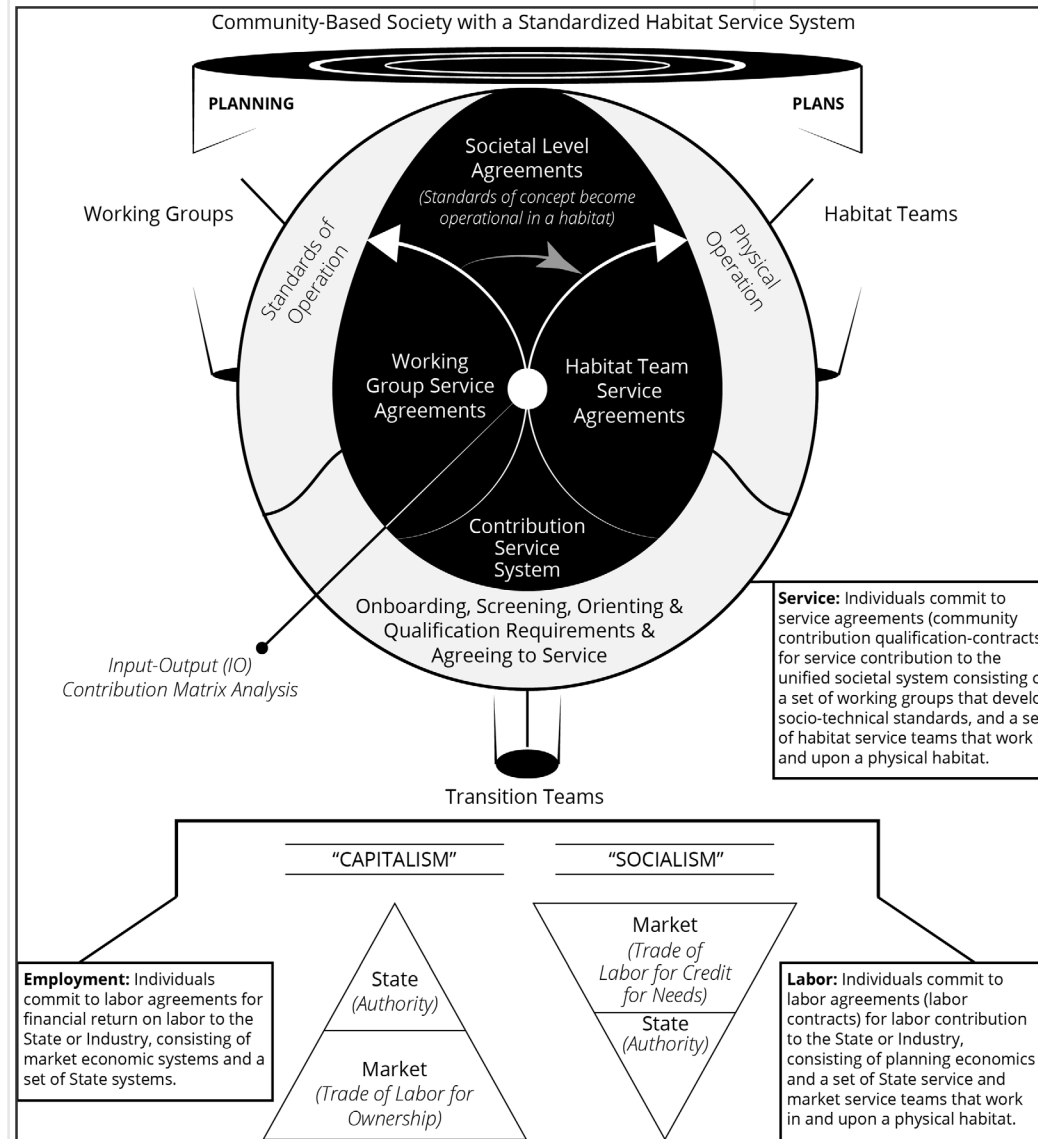

Economic equity

The Project's publications explain how economic equity is achievable through unified planning, information systems development, and economic calculation.

Common heritage

The Project's publications explain how resources and societal services are the common heritage of all of the Earths inhabitants.

Auravana standards are a solution to the problems of poverty and economic inequality.

Project Proposal

- 1) A unified model for global human fulfillment.
- 2) A socio-technical standard for society.
- 3) A socio-economic information system.
- 4) A specification standard to be used in the planning, duplication, and actualized operation of community.

There are plenty of resources on the planet to provide everyone with a high quality-of-life. Currently, society configures those resources very poorly. We need a community-type society to configure the resources differently. Presently, capitalism arranges resources for the benefit of some over others. It is possible to create a type of society that configures planetary resources for everyone's highest benefit. A high quality-of-life means that everyone has life, technology, and exploratory needs met (given the best available) without coercion.
